## 3.1 Containers

| Token                | Width  | Tailwind                      | Use                                                                                    |
|----------------------|--------|-------------------------------|----------------------------------------------------------------------------------------|
| <code>page</code>    | 1280px | <code>max-w-pg-page</code>    | Default container: navigation, sections, filter bars, card grids, Mental Health Series |
| <code>content</code> | 1100px | <code>max-w-pg-content</code> | Topic and event pages, centered banners                                                |
| <code>reading</code> | 680px  | <code>max-w-pg-reading</code> | Long text: legal pages, articles, single-column forms                                  |

Hero text may limit its reading width with `max-w-[480px]` or similar; those are not containers.

### Side margins (gutter)

```
<section className="px-6 md:px-10 lg:px-14">
  <div className="max-w-pg-page mx-auto">...</div>
</section>
```

- Mobile: 24px · Tablet ( $\geq 768$ ): 40px · Desktop ( $\geq 1024$ ): 56px.
- The section background runs edge to edge; the content is centered inside it.
- If a section has few elements (e.g. image + newsletter), the group is **centered** inside the container ( `lg:justify-center` ) instead of sticking to the left.

## 3.2 Breakpoints

Tailwind's breakpoints are used. The rule of thumb: **mobile and tablet stack; columns start at `lg`**.

| Prefix          | From   | What changes                                                                                                    |
|-----------------|--------|-----------------------------------------------------------------------------------------------------------------|
| (base)          | 0      | One column, 24px gutter, mobile-size headings, ☰ menu                                                           |
| <code>sm</code> | 640px  | Card grids go to 2 columns; row buttons sit next to the content                                                 |
| <code>md</code> | 768px  | Desktop-size headings, 40px gutter, filter bars on a single row                                                 |
| <code>lg</code> | 1024px | <b>Full navigation</b> , 2-column heroes, sidebars on detail and lesson pages, footer in rows, 3–4 column grids |

| Prefix | From   | What changes                                                                                          |
|--------|--------|-------------------------------------------------------------------------------------------------------|
| xl     | 1280px | Fine adjustments (3 columns of questions in Ask a Therapist); the container is already at its maximum |

**Degrade in steps** (Scalar principle): 4 → 2 → 1 or 3 → 2 → 1 columns, never straight from 4 to 1.

Anything with a large fixed width (248–300px sidebars, 420–480px images) applies it only from `lg` ( `w-full lg:w-[300px]` ). On tablet, fixed widths were what caused horizontal scroll.

## 3.3 Vertical rhythm

| Context                             | Mobile → desktop                | Tailwind                    |
|-------------------------------------|---------------------------------|-----------------------------|
| Standard section                    | 56 → 80px                       | <code>py-14 md:py-20</code> |
| Compact section (listings, filters) | 40 → 56px                       | <code>py-10 md:py-14</code> |
| Page hero                           | 96px on top (fixed 56px navbar) | <code>pt-24 pb-14</code>    |
| Section title → content             | 24–32px                         | <code>mb-6 / mb-8</code>    |
| Between cards in a grid             | 16–20px                         | <code>gap-4 / gap-5</code>  |
| Inside a card                       | 16–20px                         | <code>p-4 / p-5</code>      |

Sections alternate by **background color** (cream → white → tint-soft → navy) instead of divider lines. For highlighted blocks inside a section, see [Highlighted blocks](#).

## 3.4 Grid patterns

| Pattern                | Classes                                                                                                                    | Use                                               |
|------------------------|----------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------|
| Resource cards         | <code>grid-cols-1 sm:grid-cols-2 lg:grid-cols-3</code> (or <code>lg:grid-cols-4</code> ) <code>gap-4/5</code>              | Resource Library, home pages, a topic's resources |
| Courses                | <code>grid-cols-1 md:grid-cols-2 xl:grid-cols-3 gap-4</code>                                                               | On-Demand Courses                                 |
| Questions with sidebar | <code>grid-cols-1 sm:grid-cols-2 xl:grid-cols-3 gap-5</code>                                                               | Ask a Therapist                                   |
| Detail + sidebar       | <code>flex flex-col lg:flex-row gap-6</code> ; sidebar <code>w-full lg:w-[280px] - [300px]</code> , <code>lg:sticky</code> | Course, lesson, question                          |
| Text + image (hero)    | <code>grid grid-cols-1 lg:grid-cols-2 gap-10 items-center</code>                                                           | Coaching, Courses and Get Help heroes             |
| Benefits / steps       | <code>grid-cols-1 sm:grid-cols-2 lg:grid-cols-4</code>                                                                     | Navy band and steps on Parent Coaching            |
| Help lines             | <code>grid-cols-1 md:grid-cols-2 xl:grid-cols-3 gap-5</code>                                                               | Get Help                                          |
| Topic + sidebar        | <code>grid-cols-1 lg:grid-cols-[1fr_340px] gap-8 lg:gap-14</code>                                                          | Mental Health Series topic page                   |

## 3.5 Patterns

### Standard card ( UnifiedCard )

- White background, `rounded-pg-xl`, `pg-line` border, `card` shadow.
- 150px-tall image on top ( `object-cover`, or `object-contain` with padding for logos).
- Content with `p-4 : navy` `h4` title, slate `small` description, teal dark `small` metadata.
- Full-width Primary button anchored at the bottom ( `mt-auto` ), so every card in a row aligns its button.
- Destination: `to` (internal route, `<Link>` ), `href` (external, new tab) or `onClick` .
- Optional badge: navy pill with white text in the top-left corner.

Color variant (home): bottom block in `pg-sage` with `pg-navy` text. Hover on clickable cards: `card-hover` shadow and at most `y: -2` . No card scaling.

Until a section has its own detail pages, its cards link to a **sample page** (courses alternate the Milestones and Free Yourself templates; resources open "Building Your Child's Confidence").

### Filter bar

Same pattern on On-Demand Courses, Ask a Therapist and Mental Health Series:

```
<div className="bg-white border-y border-pg-line sticky top-14 z-30 shadow-pg-card">
  <div className="max-w-pg-page mx-auto px-6 md:px-10 py-3 flex flex-wrap md:flex-nowrap items-center gap-3 md:gap-4">
    {/* search: relative min-w-0 flex-1 md:flex-none md:w-64; input bg-pg-cream rounded-pg-md py-2.5, text-pg-sage magnifier */}
    {/* chips: order-last basis-full md:order-none md:basis-auto flex-1 min-w-0 overflow-x-auto gap-2 */}
    {/* "Featured": sort menu on the right */}
  </div>
</div>
```

- Full width, below the hero, and **sticky under the navigation** while browsing the list it filters (if the page continues with other content, the bar sits inside the listing block so it releases at the end).
- One bar per listing: search and chips are never repeated further down.
- On mobile: search + "Featured" on top, chips on their own scrollable row.

### Section title with a count

4×20px sage bar + navy `h3` title + count pill `bg-pg-tint text-pg-teal-dark text-xs` ("Resource Library · 9 resources", "Browse All · 15 questions").

### Newsletter

The button sits inside the input box: `flex items-center gap-2 rounded-pg-xl bg-pg-tint-soft p-1.5` (on navy, the box is `bg-pg-navy-hover` and the button is Inverse).

## Event pop-up / dialogs

`EventModal` : 320px card with a teal header, `rounded-pg-xl`, `shadow-pg-overlay`. Next to the element that opens it on desktop, centered on mobile. `role="dialog"` with `aria-modal`, trapped focus, closes with Esc, the X or a click outside, and returns focus when closed.

## Video

Vimeo videos use an `iframe` in `aspect-video`, `rounded-pg-2xl` (featured) or `rounded-pg-xl` (cards), with a descriptive `title`, `allow="autoplay; fullscreen; picture-in-picture"` and `dnst=1` in the URL. The Mental Health Series welcome video loads the player directly; topic page videos show a thumbnail and load the player on click.

## 3.6 Navigation

- Fixed 56px navy navbar ( `h-14` ); the logo always links to the home page.
- From `lg`, full links; below it, a `≡` button opens the menu (closes with Esc, an outside tap or on navigation) and returns focus.
- Every new page opens at the top ( `ScrollRestoration` ); back/forward restores the position.

## 3.7 Checklist for a new screen

1. `pg-cream` background, `max-w-pg-page` container with a `px-6 md:px-10 lg:px-14` gutter.
2. A single `display` (home pages only) or `h1` per page.
3. Sections with `py-14 md:py-20`, alternating the background color.
4. Grid from table 3.4, degrading in steps; fixed widths only from `lg`.
5. Cards with `UnifiedCard`; listings with the standard filter bar.
6. One teal Primary per section; buttons with `<Button>`.
7. Review at **390, 768, 1024 and 1280px**.
